Abstract (en)
[origin: EP2364926A1] The insert has a suction body provided with an absorber material for taking up liquid, and a tubular bag formed from a single-piece foil, where the tubular bag is liquid permeable. The suction body is enclosed against withdrawing of the absorber material from the tubular bag. The tubular bag exhibits interior volume about 150-200 percent of volume of the suction body in a dry condition for expanding the suction body while receiving liquid. A seam is arranged at center on a flat side of the tubular bag. Other two seams exhibit sides for locking the tubular bag. An independent claim is also included for a food carrier comprising a bowl for receiving food separated during storage liquid.
