Abstract (en)

[origin: EP2365120A1] The machine has a tub arranged in a housing, and a drum rotatably mounted in the tub. A dispenser (4) has chambers (5.1, 5.2, 6) for provision of powder and liquid treatment agents that are dispensed by washing liquid from the chambers into the tub. One of the chambers for the liquid treatment agent is formed as a one-way container for applying portioned detergent, where the one-way container is equipped as a closed cap cup (7) with a discharge unit arranged at a bottom. The discharge unit is activated by a cover flap (10) tiltable on the cap cup.
