Abstract (en)

[origin: EP2365133A2] The machine has a swivel unit comprising a swivel arm that carries a rear support wheel on a null side. A pivot gear controls adjustment of the swivel unit between an outwardly pivoted position and an inwardly pivoted position around a swivel axis (17) of a link joint (13), where the pivot gear is a spatial gear. A thrust member is adjustable along vertical direction. The pivot gear comprises a deflection device, which is arranged in a manner such that the deflection device deflects vertical movement of the thrust member to horizontal inwardly and outwardly pivoting movement of the swivel arm. The spatial gear is a coupling gear.
