Abstract (en)

[origin: EP2365169A2] The rail (10) has a water drain element (20) arranged between multiple partial profile sections (25), and a groove (21) formed on a lower side of the water drain element and extending transverse to a support rail axis over an entire width of the water drain element. The water drain element is made of an elastomer material i.e. thermoplastic elastomer, where width of the water drain element is 2 to 5 percent larger than a constructional distance between the partial profile sections. Slots are formed on an upper side of the partial profile sections.
