Abstract (en)

[origin: EP2365172A2] The element (10) has a right-angled attachment section (12) engaged at a slide shoe section (11) that exhibits a U-shaped cross-section. Locking and/or guide elements are arranged on outwardly directed side surfaces of the attachment and shoe sections along guide lines (15, 16) that are crossed with each other. A guide rail (14) is arranged on one of the guide lines and formed from two parallel bars, and a stop bar (17) is arranged at the side surface of the attachment section. A locking element is arranged on a side of the other guide line and designed as a locking wedge (18). An independent claim is also included for a slide wing comprising two right-angled plastic profiles.
