Abstract (en)

[origin: EP2365404A1] The dial (23) has a visible surface including raised and recessed areas (28, 29). A first enamelled part (25) is formed by a substrate with a hole. Second and third enamelled parts (24, 27) are formed by another substrate. The second and third parts include a main projecting face that is larger than a section of the hole. One of the parts includes an enamel coated substrate. The second and third parts are secured to the first part so as to totally cover periphery of the hole for forming the dial. One of the parts includes a nacre coated substrate. An independent claim is also included for a method for manufacturing a partially enamelled dial.
