Abstract (en)

It is provided an access-enabling safety device (1) comprising at least one biometric reader (3) adapted to recognise biometric parameters, at least one evaluation member (5) suitable to evaluate said biometric parameters and give access as a function of said biometric parameters, in particular the biometric reader (3) being adapted to recognise at least one safety parameter and one emergency parameter, while the evaluation member (5) is adapted to give access when it receives the safety parameter and to signal a danger situation when it receives the emergency parameter.
