Abstract (en)

[origin: WO2010019032A1] The present invention relates to a device for tickling a human body, comprising a tickling member for making contact with the body, and a moving member for automatically moving the tickling member so that, at least during use, the body is tickled in different places. The invention provides a relaxation device suitable for personal use at home or for instance in a health centre. The whole is light, easy to place, adjust and take into use. Using the invention the user experiences a light, relaxing tingling/tickling of the body. The device thus provides relaxation when and for as long as desired.
