Abstract (en)

[origin: WO2010076444A1] The invention relates to a structure (10) for supporting a motor vehicle body, comprising a horizontally extending frame (12) and at least one support leg (16a) that is supported by the frame (12). The invention is characterized in that the support leg (16a) includes a bottom base (24a) that is mounted on the frame (12), a supporting top plate (26a) which is disposed above the base (24a) and has a substantially horizontal upper surface (60a) to support the vehicle body, and a mechanical pivoting means (28a) that is inserted between the top plate (26a) and the bottom base (24a) such that the plate (26a) is mounted to be pivotable relative to the base (24a) about at least one first horizontal axis (C).
