Abstract (en)
[origin: WO2010075829A1] By the variable adjustment of the components of the frame/rod system, it becomes possible to follow the position of the sun with the sun protection - see drawing fig. 2. When the sun is high in the sky, the roof surface can be adjusted symmetrically as a pitched roof. To offer protection from a lower position of the sun, the roof is adjusted asymmetrically.
