Abstract (en)

[origin: WO2010066984A1] The invention relates to a busbar bushing of the type comprising: a longitudinal busbar (2); a fitting (4) for holding the busbar (2) in place when passing through a wall (P), the fitting (4) being electrically insulating; a central casing (54) for protecting the exposed end (10) of the busbar (2), which projects on one side of the fitting (4); at least one connector member (56) provided for electrically connecting the exposed end (10) of the busbar (2) to an electrically conducting cable, characterized in that it includes at least one secondary protective casing (58) in which most of the connector member (56) is housed, the connector member (56) being capable of occupying a number of angular positions about a rotation axis (X) relative to the exposed end (10) of the busbar (2), the secondary protective casing (58) being able to occupy a number of angular positions around the same rotation axis (X) relative to the central protective casing (54).
