Abstract (en)

[origin: EP2366308A2] The frame device (10) has a furniture leg (12) that is variably adjustable in the length. The length of the furniture leg is adjustable over furniture leg elements (16,18) that are coupled with each other over a closure (14) like a bayonet closure. The furniture leg elements are movable relative to each other. The former furniture leg element is formed by a pipe-shaped element which forms a section of the closure. An independent claim is also included for a table leg for a student table.
