Abstract (en)
[origin: EP2366438A1] The post (1) has an anchorage unit arranged between a stabilization base (2) and a lower part (3a) of a resilient element (3) e.g. strap, where the unit is constituted of anchorage systems (4a - 4c) and lower ends (13a - 13b) of stays (12 - 12c). An opening (6) is arranged between a lower end (7) of a longitudinal flexible element (5) i.e. flexible telescopic tube, and the base. Another anchorage unit (8) i.e. male and female detenting system, is arranged between an upper end (9) of the flexible element and an upper end (10) of a longitudinal upper part (3b) of the resilient element. The resilient element is made of textile material. An independent claim is also included for an assembly of sports game comprising a width adjusting system.
