Abstract (en)

A machine (1) for the production of ceramic products (M) comprises at least: a mould (S) made up of at least four parts (2, 3, 4, 5) adapted to form, in a closed configuration, a cavity (C) for casting the ceramic product (M); means (6, 7) for clamping and containing the mould (S) acting on the mould (S) in the closed configuration; the means (6, 7) having a tubular shaped, open-ended body, matchingly shaped to be coupled to the mould (S) to enable the mould (S) to be enclosed on four closing surfaces or outsides of it; and movement means (8) acting between the clamping and containing means (6, 7) and the mould (S) to enable the clamping and containing means (6, 7) themselves and the mould (S) in the closed configuration to slide relative to each other along a single, horizontal movement axis (X) between a first, non-operating position, where the mould (S) and the clamping and containing means (6, 7) are apart, and a second, operating position, where the mould (S) and the clamping and containing means (6, 7) are matchingly coupled inside one another.
