Abstract (en)

[origin: EP2366635A1] The assembly has a removable lid (10) for closing a fluid body container containing fluid body i.e. infantile powdered milk. An express cup assembly (20) decants the fluid body in a recipient i.e. feeding bottle (3). The cup assembly has an express cup (21) that passes from a compact storage configuration to a deployed decanting configuration, in a reversible manner. A connection unit (30) connects the cup assembly with the lid during decanting. The connection unit has a fixation unit i.e. fixation member (32), that fixes a rigid rod (31) with the lid. An independent claim is also included for a fluid body container i.e. infantile powdered milk container, comprising a lid assembly.
