Abstract (en)

The present invention provides a knitting method of a V-neck peak for effectively preventing a hole from being formed in the V-neck peak. When knitting the V-neck peak using a flat knitting machine, one side collar portion 7L and one side central portion 5L, the other side collar portion 7R and the other side central portion 5R are knitted approximately from one side to the other side in a longitudinal direction of a needle bed on both sides of a center line X-X which divides a V-neck in two in a knitting width direction of knitwear. At that time, one side widening stitch 4L and the other side widening stitch 4R are previously formed on one side and the other side of the center line X-X, the widening stitches 4L and 4R are inserted into empty needles made when collar portions 7L and 7R are transferred, respectively, thereby preventing a hole from being formed.
