Abstract (en)

The method involves inserting a main displacement pump between an injection pump and an oil well, where the displacement pump is a gear pump. Speed of the displacement pump is controlled using Telma(RTM: electric brake), where the displacement pump is reversible. The brake is connected to an engine shaft, where speed of the displacement pump is controlled by a valve that is located in downstream of the displacement pump. Closing and opening processes of the displacement pump are managed according to injection pressure determined for the well.

Abstract (fr)

Procédé de réduction de la pression d'injection d'une solution de polymère hydrosoluble à partir d'une même pompe d'injection dans divers puits de pétrole d'un même champs en fonction de la pression de fracturation de chaque puits selon lequel, on intercale entre la pompe d'injection et chacun des puits, une pompe volumétrique principale dont on contrôle la vitesse au moyen d'un frein.
