Abstract (en)
Provided is an instrument housing case, which is capable of preventing an instrument from falling down, and which is capable of achieving a reduction in weight. The instrument housing case (10) houses an instrument long in one direction, and includes: a main body case (20) which is defined by an upper surface (21) and a lower surface (22) each having a larger width, and both side surfaces (23 and 24) each having a smaller width and both end surfaces (25 and 26) closing, to thereby form a cylindrical shape as a whole, the main body case including an opening portion (27) cut out a portion ranging from a middle portion in a longitudinal direction of the upper surface (21) through a middle portion in a longitudinal direction of each of the both side surfaces (23 and 24) to a vicinity of one end surface (25); and a cover body (30) which forms a shape adapted for the opening portion (27) of the main body case (20) and which is pivotably fixed through a hinge (40) to an edge portion of the opening portion (27) in the upper surface (21) of the main body case (20), the edge portion being away from the end surface (25).
