Abstract (en)
[origin: WO2010057934A1] Flexible catheter for thermal coagulation of veins comprising an elongated body with a proximal end (1) and a distal end (2), whereby the distal end (2) of the elongated body comprises a tip (3) in a conductive material, whereby the elongated body comprises a conductor (4) which makes contact with the tip (3) and extends between the distal end and the proximal end, and whereby the outside of the elongated body is provided over at least part of its length, but not at the tip (3) with a layer of insulating material (5), characterized in that the elongated body is provided to be inserted in veins having a diameter of between 1 - 4 mm.
