Abstract (en)

[origin: WO2010063971A1] The present invention relates to a cover for closing an opening of a container (C) body for receiving a material soaking in a liquid, such as foodstuffs soaked in a juice. Said cover (1) includes: (i) a ring (2) comprising an inner portion (6) to be extended to the body opening, said inner portion (6) comprising a central opening (10), and (ii) a strippable membrane (3). The inner portion (6) of the ring (2) also comprises a straining member (8) that enables, at the time of separation of the strippable membrane (3) from said ring (2) and depending on the slope applied to the contents, either the straining of a packaged material as a result of said straining member (8), or the drainage of the materials through the central opening (10).
