Abstract (en)

[origin: WO2010072549A1] The invention relates to an elevator support means monitoring device, to an elevator system having such a monitoring device, and to a method for monitoring an elevator support means, wherein a characterizing property, preferably an electrical resistance, of the elevator support means (9) or of a tension support (21) of the elevator support means (9) is monitored and a sudden change in said characterizing property is detected. A state of the elevator support means (9) is determined by evaluating several consecutive, sudden changes in said characterizing property.
