Abstract (en)

[origin: WO2010070119A1] The invention relates to an anemometer probe and to a method of producing an anemometer probe having a single wire or n wires ($n > 1$) for a measurement close to a wall, comprising, for at least one of the wires: a) the positioning and retention of a straight portion of the wire (2), said wire comprising a metal core (21) surrounded by a protective sheath (22), on two surfaces; b) the stripping of part of the sheath (22), so as to reveal an active measurement zone (14) of the wire; and c) the brazing of the wire to two pins of the body of the probe.
