Abstract (en)

[origin: WO2010057537A1] The invention relates to a system for the computer-assisted interpretation of pre-recorded music. The system essentially includes at least one musical actuator (A1, A2) actuated by a user-performer, memory means for storing musical information (MM) concerning the score of a piece of music to be played by the user, and means for transmitting the musical information to an electronic/computer device (A4) adapted for generating audio signals from the received musical information. The system is characterised in that it further comprises a memory (MM) for musical data defining the totality of the musical events (EM) that form the piece of music to be played. The invention can be used for playing pre-recorded music.
