Abstract (en)

[origin: WO2010069728A1] The invention relates to a method for producing a thin-film solar cell comprising a photoactive layer (100), which has on the front side an electrode (104) that is optically transparent in the range of visible light, wherein an electrically conductive network (110) of conductor tracks is applied on the rear side and/or the front side of the photoactive layer (100), said network being optically transparent in the range of visible light as seen macroscopically.
