Abstract (en)
[origin: WO2010066998A2] The invention relates to method for communicating between a first client of an instant messaging system and at least a second client of said system, said first and second clients being hosted in a first and second terminal, respectively. The novel characteristics of the method include: a step of transmitting, from the second terminal to the first terminal, a request for establishing a connection between the first and second clients; a step of detecting a reception of said request by monitoring software running on the first terminal; a step of activating said first client using said monitoring software; and a step of establishing a communication between said second client and said first client.
