Abstract (en)

[origin: EP2368645A1] The arrangement has consumption material storage containers (1, 2) e.g. cans and drums, with storing regions attached to terminals (3, 4), and radio frequency identification (RFID) reading devices (11, 12) attached to the terminals of the containers. RFID tags (9, 10) are provided in each of the containers for storing information to identify consumption material stored in the respective container, where a part of the information is stored in the RFID tags in a tamper-proof manner. The reading devices of the containers read the respective RFID tag of the associated container. An independent claim is also included for a method for machine cleaning and/or disinfecting objects.
