Abstract (en)

[origin: EP2368807A1] The assembly (1) has a peripheral lateral wall (14) with an upper end that is connected to an upper end (11a) of an external skirt (11) by a portion of an upper peripheral plate (15a). A lower end of the wall is prolonged to form a portion of a flat circular lower plate (15b). Dimension of the portion of the lower plate enables the portion to cooperate and position with an internal peripheral edge (16) of an opening of a flange ring (6) of a base (5), so that the portion and the peripheral edge are acted jointly in a sealed manner when a stopper (10) is completely screwed in closing. The stopper and the base are made of molding of plastic material.
