Abstract (en)

[origin: EP2369086A2] A prefabricated insulating panel for roofing of buildings comprises a lower sheet (2) made of rigid or semirigid material, an upper sheet (3) made of rigid material, and a layer (4) of thermally insulating material between the lower and upper sheets (2,3). The upper sheet (3) is shaped so as to define two inclined surfaces (10), opposite with respect to a ridge region (11) of the panel, which form two opposite pitches of the panel (1), the ridge region (11) being defined in an intermediate area or area of transition between the two inclined surfaces (10).
