Abstract (en)

[origin: EP2369172A2] The machine i.e. hydraulic motor (1), has a housing (2), and a shaft guided in the housing. A sensor arrangement (10) has a transducer (12) that stays in effective connection with the shaft. The arrangement has a retaining area in which the transducer is arranged. The retaining area stays in fluid connection with an inner area of the housing, and sealed outwardly. A receiver (15) is arranged at an outer side of the housing and the retaining area. The transducer has a support element that works together with a sensor housing (11), where the sensor housing is screwed to a front cover (9).
