Abstract (en)

[origin: WO2010051969A1] The invention relates to a device for feeding cut tobacco from a tobacco delivery unit (2) to a tobacco processing machine, preferably to a cigarette production machine, having a conveyance device (20) that can be connected to at least one tobacco delivery unit (2) and to at least one tobacco processing machine and that is intended for conveying cut tobacco (6), a control means (36) for influencing the conveyance speed of the cut tobacco (6) in the conveyance device (20), a sensor device (44) and a control device (40) that is connected to the sensor device (44) and the control means (36) and is provided to control the control means (36) in dependence on a signal output by the sensor device (44) for the purpose of regulating the conveyance speed at a predetermined value. The invention is particularly characterized in that the sensor device (44) is designed to measure the mass flow rate or the volume flow of the cut tobacco (6).
