Abstract (en)
[origin: WO2010063065A1] The present invention provides a drink holder (30) including a platform (31) having a plurality of support members (38), each of which is adapted to support the platform (31) on a substantially level surface (such as a table) and each having an inner cavity which opens to the upper surface of the platform (31), each of the inner cavities of the support members being adapted to accommodate a drink container. In a preferred embodiment, the inner cavities of the support members (38) are generally cup-shaped and of appropriate size and shape to accommodate drink containers. The support members thereby form cup-shaped holders for drink containers.
