Abstract (en)
[origin: WO2010072658A1] An elevator system (10) is proposed, comprising at least two elevator cabins (12, 14), each of which comprises at least one elevator cabin door (16, 18) and each of which is provided for independent displacement in a common shaft (20), and comprising a plurality of shaft doors (22) and a safety device (24) having at least one door opening sensor (25, 26), at least one evaluation unit (28) and at least one data line (30) between the door opening sensor (25, 26) and the evaluation unit (28), wherein the evaluation unit (28) evaluates at least one signal of the door opening sensor (25, 26) in at least one evaluation step.
