Abstract (en)
[origin: WO2010072657A1] The invention relates to a counterweight (4) in an elevator installation (100) comprising at least one elevator car (2) and at least one counterweight (4), wherein the at least one elevator car (2) is capable of being moved on guide rails (7) in an elevator shaft (1) by a drive (6) with in each case one driving pulley (5) and with a supporting and propulsion means (3). The at least one counterweight (4) is in the form of a hollow body (34) with a filling (20). In the event of a freefall, the hollow body (34) is destroyed, with the result that the filling (20) can emerge.
