Abstract (en)

[origin: WO2010063633A1] The invention relates to a method and to a device, in particular operated according to the method, for recovering a processed fluid (9) from a contaminated fluid (6) through evaporation and condensation using heated air as a carrier material. In the process, the air is run through a substantially closed circuit (1) through natural convection, wherein the air is heated in an air collector (2) (solar collector) in order to then pass through a cascade evaporator (4) through which the contaminated fluid (6) flows. After the saturated hot air (7) exits the cascade evaporator (4), the absorbed moisture is released in a subsequent condenser (8). Then, the cooled and dried air is reintroduced into the air collector (2).
