Abstract (en)

[origin: WO2010071576A1] The present invention relates to a system for handling road signs, comprising a support intended to be placed along a road section, on which support a road sign can be placed, wherein said road sign comprises an information carrier in the form of a surface section which will be positioned in a substantially vertical plane when the road sign is placed on said support, characterized in that said system comprises a pair of interacting connecting means, said connecting means comprising a first profiled unit (3), preferably a keder strip, along an upper edge of the road sign, and a second profiled unit (1) which is placed on the support and is adapted in shape to said first profiled unit. The invention also relates to a method for manufacturing an inventive road sign, and a method for manufacturing a sign cover.
