Abstract (en)

[origin: WO2010060787A1] The invention relates to an ice maker for producing ice (69), comprising an ice cube tray that can be filled with water (10) and surrounded by cold air to produce ice and a doctor blade element (35), to which the ice is supplied (69) and which guides the ice (69) into a collection container (13). According to the invention, the doctor blade element (35) and a flow guide element (41) form a structural unit which, together with the base of the ice cube tray (10), delimits a flow chamber (45) for the flow of cold air (I).
