Abstract (en)

[origin: WO2010076497A1] The method according to the invention is implemented by a gateway (GW) for accessing a voice over IP network (NW), connected to a plurality of terminals (T1, T2) associated with a single telephone identifier in said network, and comprises, upon detection by said gateway of a transition to a connected or disconnected status of a call established between an external terminal (TExt) and a terminal (T1) of said plurality of terminals, a step of sending, to at least one other terminal (T2) of said plurality of terminals, a message including information related to the transition of said call to said connected or disconnected status.
