Abstract (en)
[origin: EP2371253A2] The toilet seat (12) has hinges (20, 22) with a securing element engaging in a groove of bolts in a fastening position, where the bolts are accommodated in recesses of the hinges. A knob of the hinges moves the securing element from the fastening position by a manual actuation of the knob such that the securing element is released from the groove. The hinges have two arms rotatable around longitudinal axes of base bodies, where the arms are connected with a toilet cover (16) and a toilet seat part (18) over two connections, respectively.
