Abstract (en)

The device (100) has a container (104) comprising an inner area filled with a fixed amount of solvent, and a mounting device (103) for mounting the container at a laboratory vessel (101) that has an inner area, where the solvent is dosed into the inner area of the vessel from the container. An opening unit (107) opens the container, such that a continuous connection for the solvent is established from the inner area of the container to the inner area of the vessel. Another opening unit opens a locking device of the vessel, where the mounting device has an elastic stopper (111).
