Abstract (en)

[origin: EP2371487A1] The device has tool holders (1, 2) with clamping elements for retaining and holding a lathe tool (4), and closure elements (5, 6) formed as plug elements for detachably connecting the clamping elements with each other against force of a spring (7). An opening (15) in one of the clamping elements has an edge-sided flexible lug (19), and the plug elements lock the lug in an assembled condition and releases the lug in a released condition. The locked lug provided in one of the clamping elements engages in an undercut (13') of a retainer (13) in the other clamping element.
