Abstract (en)
[origin: EP2371728A1] The bag (10) has a front part (17) and a back part (16) connected with each other by side folds (17.1, 17.2), where the bag is made of a composite material e.g. paper-aluminum foil-laminate or paper-plastic foil-combination. The parts form a main pouch bag (11). The back part proceeds upward in a cover flap (12) rising over an upper edge of the front part. The front part proceeds downward with the side folds. The bag is turned down rearward at a fold (18) and attached to the back part with the turned-down region (15) for forming an upward open auxiliary pouch bag.
