Abstract (en)

[origin: EP2372031A2] The structure (1) has a roof deck (2) comprising a horizontal upper surface cover (3) supported on parallel roof deck beams (4). A suspended ceiling (5) is arranged vertically below the roof deck, and an edge side supporting device is provided for fastening the roof deck and the ceiling at a vertically running wall (7'). The ceiling has a horizontal lower surface cover (8) supported on suspended ceiling beams (9). The roof deck beams and suspended ceiling beams are attached at the supporting device so that a supporting connection between the roof deck and suspended ceiling is formed. An independent claim is also included for a wooden beam ceiling comprising a ceiling structure.
