Abstract (en)
[origin: EP2372041A2] The support plate production method involves feeding the foil-like plate (11) with recesses (14) formed to the processing station in which the adhesion-strengthening layer (27) made of the web-like material is applied to the plate side (22, 26), and the recesses are lined. The single forming step is performed to form the chambers (12) with the recesses in the foil-like plate and lining on at least one plate side. The recesses with the adhesion-strengthening layer are made of web-like materials.
