Abstract (en)
[origin: EP2372043A2] The scaffold has scaffold elements pluggable to each other in a plug direction by a pin connection. The pin connection is produced by a pin and a retaining region formed at the scaffold elements, respectively. The pin and the retaining region comprise passages formed perpendicular to the plug direction. The passages are aligned for insertion of a securing element (8) for pin connection in plugged condition of the scaffold elements. The securing element comprises a locking device for preventing unauthorized removal of the securing element.
