Abstract (en)

[origin: EP2372045A2] The device comprises an inclined leg (12), which is variable and firmly adjustable in its tilting angle, and is provided a fastening unit. The fastening unit is constructed, such that the height is adjustable, in which the tapered upper edge of the wall begins. The inclined leg is connected with a horizontal leg (6) by a swiveling axis (11). An independent claim is also included for a method for constructing a wall with a tapered upper edge.
