Abstract (en)
[origin: EP2372051A2] The arrangement has a handle piece (12), and a square bolt (14) for mounting the handle piece at a substructure (10). The square bolt is attached at the handle piece by a bolt connection or screw connection. A locking pin (32) or a locking sleeve of the bolt connection is extended transverse to a longitudinal extension of the square bolt by the square bolt and an attachment (18) of the handle piece. The square bolt is provided with an outer thread (28) in a section (24), which is protruded from the handle piece. The substructure comprises a wall (38) with a passage (40). An independent claim is also included for a method for mounting a handle piece at a substructure.
