Abstract (en)  
[origin: EP2372119A1] The stator (1) comprises a gear wheel section (4) which has multiple teeth distributed over the circumference of the stator, and a housing section (5), which is arranged in axially displacing manner on the gear wheel section and surrounds a cavity (3). Wings (9) are provided, which are formed at the housing section and are extended in the cavity. The stator is an integrally sintered part. The stator is formed from a sintered material on aluminum base. Independent claims are also included for the following: (1) a valve control shaft-displacement device with a pressure chamber; and (2) a method for manufacturing a stator.
