Abstract (en)

[origin: WO2010037220A1] The invention relates to a composite material of formula: (C-N-B-MR)_x(Al-MR)_y(R)_z in which C-N-B-MR is one or more carbides, nitrides or borides of one or more refractory metals of group IV, V or VI of the Periodic Table and/or one or more aluminium carbides, nitrides or borides chosen from Al₄C₃, AlN, AlB₂ and Al₁-67B₂₂; Al-MR is one or more aluminides of one or more of the above refractory metals, it being understood that: if MR = Nb, Ta, Hf, Zr, Ti or V, then Al-MR = Al₃MR; if MR = W or Cr, then Al-MR = Al₄MR; if MR = Mo, then Al-MR = Al₈Mo₃ or Al₁₇Mo₄ (? Al₄Mo), and R is a residual component other than carbon, comprising one or more phases chosen from Al₄C₃, AlN, AlB₂, Al₁-67B₂₂ and MRtAlu(C-N-B)_v in which t, u and v are numbers greater than or equal to zero, and x, y and z are the volume fractions of the respective components with $x > y$; $x + y > 0.5$; $x + y + z = 1$ and $0.01 < y < 0.5$. The invention is also aimed at the use of this composite material as a coating in a component that can be wetted by liquid aluminium and can be used in electrolysis cells.
