Abstract (en)

[origin: WO2010063554A1] The invention relates to a domestic appliance comprising a main control unit (9) and a measuring unit (2) insulated from the main control unit (9) and having a measurement control unit (8) which is coupled to the main control unit (9) via a data transmission channel (10) via which a measurement variable detectable by the measuring unit (2) can be transmitted to the main control unit (9). The data transmission channel (10) is a line (12) having a protective impedance (13, 19). The invention also relates to a corresponding method for transmitting a measurement variable which is detected in a domestic appliance by means of a measuring unit (2) and which is transmitted via a data transmission channel to a main control unit (9) of the domestic appliance insulated from the measuring unit (2).
