Abstract (en)
[origin: WO2010066738A2] The invention relates to a refrigerator comprising: a dispenser (8) provided in a door (3), the dispenser (8) comprises a dispenser casing (10), the dispenser casing (10) comprises a first region (51) and a second region (52) located close to the first region (51), the first region (51) and the second region (52) are adjacent to a heat insulating layer (6) of the door (3); and a first heater (38) arranged in the first region (51) for supplying heat to the dispenser casing (10). According to the proposal of the invention, the refrigerator comprises a second heater (39) arranged in the second region (52) for supplying heat to the dispenser casing (10), the first heater (38) and the second heater (39) are controlled independently.
